

## Welcome to our new appointment with ARphymedes Plus!

We don't want to keep you on your toes any longer, so in this new session we will set out together to explore one of the essential components of the project.

Ready?

### What's going to be new?

We are pleased to announce a new resource that will appear in the coming months: the **Multimedia version** of the Student Book is being prepared!

What makes it so special?

At **ARphymedes Plus**, we believe that education, which as we know plays a fundamental role in supporting and shaping present and future generations, always needs a strong drive for improvement, filling in the gaps and finding the most engaging and attractive ways to transmit knowledge and values. For education to be able to embrace a transformative process, it cannot but keep itself open to contaminations from seemingly parallel worlds.

The **innovative approach** of the Student Book, based on the identification of barriers that prevent SEN students from participating and learning in relation to the lessons/topics covered, we will adapt the content and develop a full multimedia version of the standard student book developed in ARphymedes, including full ICT support for accessibility features, implementing multisensory approaches that allow visual, tactile and auditory support of the content presented.

This will play a key role in enabling flexible curriculum development and helping

students with disabilities to **participate as equals** in the learning experience. In this way, students will be able to 'self-customise' and learn with their own preferences and settings.

This customisation feature will remove the attitudinal barrier.

In addition, we will support **teachers** and **families** in using the educational tool, including developing a book for teachers and parents.

It will encourage and propose strategies to the teachers to respond to children's special needs in an **inclusive environment**.

Studying **Physics** will never be the same again!
